October Reporting Release

Contents

Overview 1
What's Changing? 1
Timeline 1

Overview

This release only contains changes to content, not structure.

No fields are added, removed or renamed in any export, so report structure and ingestion are unaffected, but there are two updates:

1. The User Export now includes users who have not recorded, so user counts will go up
2. Orders generated count now include those generated through In-Visit Orders

What's Changing?

More Users in "*User Export*"

The User Export now also includes users who have Abridge Assistant access but have never recorded: users with the Assistant Only role. To tell recording users from non-recording users, use these fields:

- `user_roles` - Physician means full recording access. Assistant Only means Abridge Assistant only, with no ability to record. Admins can upgrade any user to Physician in the Enterprise Portal.

- `total_notes_generated` - 0 for users who have never recorded.

Updated Field in "*Encounter Export*"

The field name and position are unchanged

- `orders_generated` - Now also counts orders generated during the visit with In-Visit Orders, which becomes the default with the October release. Counts may change for encounters that use In-Visit Orders.

Timeline

Monday, November 2, 2026 - Starting this week, exports will include the changes described above.
